

EXPECTED RESULT	ACTUAL RESULT	SAMPLE DESCRIPTION	WHAT YOU SHOULD KNOW
2C-B	Trimethylpentane, Acrylic polymer ++++unknown	Blue superman baggie	NOT 2C-B. Includes compounds beyond our substance library. A model candidate for our safe disposal service.
2C-B	PMA	Yellow bee pressed pill	PMA and PMMA are toxic in higher doses and can cause fatal hyperthermia. These drugs are NOT recreational substances.
2C-B	2C-B	Small, pink Mickey Mouse pressed pill	It is very difficult to determine everything that pressed pills contain because of binders and fillers
2C-B	Unknown		Be careful when taking 2C, dosages are very small.
Cocaine	Cocaine and Benzocaine	White clumpy	Cuts test appeared as ephedrine, further exploration with spectrometers contrasted results. MS1066 Propionic Acid = preserving agent, smells like body odour, Temazepam = a 'downer' used for insomnia, pain management dangerous when when mixed with alcohol
Cocaine	Cocaine, Propionic Acid, Temazepam	Green Alien Baggy, bought onsite,	
Cocaine	Cocaine, Acetaminophen	White Powder	Acetaminophen (Tylenol) False Pos with Ephedrine for cuts test MS119
Cocaine	Almost all common cutting agents	Multiple DIFFERENT samples with these results	Cuts include levamisole, ephedrine, tetramisole, phenacetin, and others! Some samples contain no cocaine at all
Cocaine	Rarely only cocaine, sometimes meth	Multiple DIFFERENT samples with these results	Some cocaine has contained aspirin, methamphetamine, and paracetamol
Cocaine	MXE	White powder	This wouldn't be a good thing to mix up...
Cocaine	Unknown	White powder in seran wrap	Sold onsite as cocaine, no cocaine present in sample. Tested positive for many other common cuts (levamisole, Ephedrine)
Cocaine	3-Methylfentanyl	Chunky white powder	Dangerously strong opioid (fentanyl analog) estimated to be between 400 and 6000 times stronger than morphine
Cocaine	Cocaine + cuts	Various different samples	Pick a cut: ephedrine, dimethyl sulfone, benzaldehyde, ibuprofen, morpholine, caffeine, benzocaine, we've seen it all Test your purchase -most substances are cut with other things, some are more dangerous than others
Cocaine	Cocaine and Methamphetamine	White powder brought onsite	
Cocaine	Cocaine and Ephedrine	Yellow Black/Batman Bag	Most cocaine has adulterants in, Ephedrine and Cocaine can be dangerous when used together
Cocaine	Unknown	Clear bag, clumpy white powder	Be careful handling clumpy substances, user reports strong burn in nostrils and no effect.
Cocaine	Dimethyl sulfone + Unknown	Green bag with pot leaf on it	(methylsulfonylmethane) causes no significant effect. It is a dietary supplement.
Cocaine	Unknown	Purple sexy lady bag	Many new designer stimulants are "unknown" to us
Cocaine	Fentanyl + cocaine	Yellow/black batman bag	Use wise decisions when taking drugs with higher risks of impurities.
Cocaine	Meth + Di-Isopropylamine ++	White powder in Blue baggy	Diisopropylene can cause skin rash and irritate sinuses, eyes nose and throat
Cocaine	Cocaine + Urea	White powder in yellow car baggie	Urea can irritate skin, eyes and respiratory tract.
Cocaine	Allopesudococaine, Phenacetin	Black club baggy	Cocaine analogue and cut
Ketamine	Ketamine + cathinones	Powder	Ketamine sample contained cathinone compound (stimulant)
Ketamine	MDMA	Powder / crystals	This may have been a mistake made by the guest or by the dealer - a good reminder to ALWAYS CHECK your stuff
Ketamine	Ketamine + 2-hexanone	Powder / crystals	...and by people who are not trained professionals
Ketamine	Fentanyl	Being sold onsite!	Get your drugs checked! Fentanyl is a powerful respiratory depressant that is extremely easy to overdose and die from.
Ketamine	Ketamine + solvents	Beige black powder	Lots of un-evaporated solvents being found in ketamine including 1,2 Di-bromo-ethane and 2-methylpentane
Ketamine	MDMA	Found in multiple samples including white "sugar" crystals	(More than one sample of 'ketamine' has been found to contain an MDxx compound instead of ketamine
Ketamine	Methoxetamine	Powder / crystals	MXE is sold as ketamine. It comes on slower and is easy to overdo it if you aren't feeling it. Start low, go slow.
Ketamine	Ketamine + acrylic polymer	Powder / crystals	This isn't a cutting agent we see regularly. We have seen lots of 'pure' samples that ain't so pure. What's in your bag?
Ketamine	Unknown	Stay High/Bomb Bag - powder crystals	Users felt extremely high for 8 hours, colour change tests are inconclusive - unknown substance bought on site
Ketamine	Ketamine + possible PMMA	Slender man pattern on baggie	PMMA can cause fatal hyperthermia at any dose. Check in with medical if feeling too hot and unwell.
Ketamine	MDMA	Red heart baggie	Many, many instances of ketamine being swapped for MDMA and vice-versa. Get your drugs CHECKED!
Ketamine	Fentanyl	Clear bag w/ white powder	Get your drugs checked! Fentanyl is a powerful respiratory depressant that is extremely easy to overdose and die from.
Ketamine	Many different substances and cuts	White crystal in ninja baggie	Raman spectrometer returned multiple results including MDMA and dimethyl sulfone, but no ketamine
Ketamine	Phenacetin	Red smiley faces on bag	NO ketamine in sample, phenacetin is a pain-relieving and fever-reducing drug commonly used as a cocaine cut
Ketamine	Fentanyl	Black & white 8-ball baggie, powder	Get your drugs checked! Fentanyl is a powerful respiratory depressant that is extremely easy to overdose and die from.
Ketamine	PMA	Fluffy white powder, bought offsite in Vancouver	PMA can cause fatal hyperthermia at any dose. Check in with medical if feeling too hot and unwell.
Ketamine	MSM	Powder / crystals	MSM is a nutritional supplement with no psychoactive effects. It might make your joints less stiff but it will hurt your nose!
Ketamine	Ketamine and Phenacetin	Yellow baggy with biohazard sign - white powder	Phenacetin is a banned substance like aspirin, banned because of dangerous side effects, hard on the heart and kidneys
Ketamine	Ketamine and an unknown chemical additive	Yellow and clear baggy white powder bought onsite	Samples brought in of ketamine this festival have been making people feel high for 8+ hours, no sleep, visuals
Ketamine	Dimethyl Sulfone	Stay High red baggy - white powder bought onsite	Test your products - we cannot test for purity, most samples have adulterants
Ketamine	MDMA	Pink bag	MDMA is a stimulant while ketamine is a depressant. They also have different durations and active doses.
Ketamine	Amphetamine	Nondescript white powder	Amphetamine is a stimulant; ketamine is a depressant. They are completely different. Test before you ingest.
Ketamine	Methamphetamine	Clear bag with off white crystals	Meth last way longer than amphetamines. It would be an unpleasant surprise
Ketamine	MDMA	Pink Bag	Lots of ketamine is coming back as another psychoactive substance that wasn't intended. Users reported feeling tired and headache, Test your stuff, train for naloxone, know the signs of overdose, do not use alone
Ketamine	Fentanyl	Clear baggy, bought on site, brownish hue to powder	
Ketamine	Possibly Oxycodone	Sold in folded magazine pocket, marked with CircleH for ha	Oxycodone is an opioid, very different dosage, experience and outcome. Test your drugs!
Ketamine	MXE and Fentanyl	Bought in Kamloops. Green pot baggies	MXE and Fentanyl is a deadly combination in large doses. Respiratory depression, dissociation to be expected.
Ketamine	Methamphetamine	Sold in a baggy corner	TEST YOUR DRUGS! Very different substance profiles
Ketamine	Dimethyl Sulfone, procaterol, unknown	Green Alien Bag	Asthma med/vaso dilator. NOT KETAMINE
Ketamine	MDMA precursors, isosafrole	Loose powder and beige rocks, clear baggy	Isosafrole and MDMA ingredients have no place in ketamine
Ketamine	Iproniazid (MAOI)		MAOI combines VERY poorly with many things. Get educated.
LSD	LSD	Triangles and circles on side 1 Fractals on side 2	LSD can have very unpredictable effects. Why not start with a half tab instead of a full tab?
LSD	LSD	Link of Zelda - side 1	
LSD	LSD	Multi color design - side 2	LSD can have very unpredictable effects. Why not start with a half tab instead of a full tab?
LSD	LSD	Blotter incl. unicorns, dancing bears, hunabku, banana pho	LSD can have very unpredictable effects. Why not start with a half tab instead of a full tab?
LSD	Unknown	Che Guevara blotter	Negative for LSD, may contain 25x-NBOME instead
LSD	2C-T-7	Vial of liquid	Death and serious injury may occur when 2C-T-7 is insufflated or combined with certain substances and medications

LSD	Unknown	Yellow Blotter tab	Probably DOI or 25x-NBOME. ACID SHOULD BE TASTELESS					
MDA	MDA precursors, MDP2P	Off white powder	Drugs cooked in an unregulated market can include many unsynthesized ingredients					
MDA	MDP2P, Methylole	Brown crystal	Talk to our info table about MDP2P and Methylole					
MDMA	Fentanyl	Blue Press Pill with moon shape	Sample had no conclusive results, but tested positive on the Fentanyl screen					
MDMA	MDA + ?	Dark tarry crystals	May be an MDA-related substance, very uncertain results					
MDMA	Alpha-MMDPPA and N-MDA	Dark Brown	Precursor and Analogue of MDA. MS1068					
MDMA	MDMA, MDEA, MPE, Caffeine and Tylenol	Large brown crystal chunks, baggy w/blue marking	Some precursors present, may have been improperly prepared. Additives present MS1048					
MDMA	MDA	Multiple DIFFERENT samples with these results	MDA - more psychedelic effects, greater neurotoxicity, experience comes on quickly - Dose lower than MDMA!					
MDMA	MDA + 2-propanol	Gel cap	MDA and unreacted precursors like MDP2P are being sold as MDMA, some samples contain solvents like xylene					
MDMA	5-APB / 6-APB	Powder in gel-cap	These novel psychoactive substances have been sold as 'ecstasy' since about 2010, they are not well understood					
MDMA	Various precursors including isosafrole	Gel-cap filled with powder	Your reminder that most black market synthesis is performed improperly with shortcuts and crude equipment					
MDMA	Unknown	Blue press tab with gameboy on it	Brought from offsite					
MDMA	Unknown	Powder in a small green bag	Not an expected MDMA result. All drugs are inherently risky, this risk is amplified if the substance in your hand is unknown					
MDMA	MDMA + caffeine	Bright pink heart-shaped press pill	Raman spectrometer returned no match, this is common with press pills because of binders and fillers					
MDMA	Ketamine		...and samples of 'MDMA' are being found to contain ketamine. This is careless & dangerous. This is why you check your drugs!					
MDMA	MDMA	White rabbit press pill	...because MDMA reacts so strongly with colour-metric reagents it is still possible that other compounds are present					
MDMA	MDMA	Green rocket pressed pill	Because MDMA reacts so strongly with colour-metric reagents it is still possible that other compounds are present					
MDMA	MDMA + solvents & precursors	Powder / crystals	Diisopropylamine, 2-propanol, MDP2P, ammonium phosphate and other chemicals are byproducts of poor MDMA synthesis					
MDMA	Unknown	Seafoam colour / playboy stamp press pill	We were unable to find MDMA (or anything else) in this sample. Dispose! Taking unknown substances is risky.					
MDMA	MDMA + unreacted safrole	Powder / crystals	Studies in the 1960s suggested that safrole was carcinogenic, causing liver damage in animals					
MDMA	Methylole	Brown powder	Cathinone analog of MDMA, but does not produce the same effects					
MDMA	MDMA	Tan powder in small clear cap	All drug use carries risk. Our reagent tests indicate MDMA was present in the sample but cannot discriminate other compounds					
MDMA	Unknown	Green capsules, white cornstarch-like powder	No MDMA in sample or any other discernible compounds. Dispose! Don't ingest unknown substances.					
MDMA	MDMA	White, double-stacked lightning bolt pressed pill	...so start low, go slow. You can always take more. You can't take less					
MDMA	MDMA & amphetamine	White Powder bought on site	Amphetamine can cause feelings of anxiety, and longer duration of insomnia. If user is feeling agitated, seek first aid MS1162					
MDMA	2 methylamine and trichloroethane	White powder in gel caps bought onsite	These additives are central nervous system depressants and have been known to cause dizziness and nausea					
MDMA	MDMA, xylene, propanol, trichloroethane	White powder from a cannabis leaf baggie	These solvents can cause central nervous system depression when ingested, which is a bad combination with MDMA					
MDMA	Sugar	White powder	The smallest taste of the substance can help you evaluate or notice risks. Test it here to be sure.					
MDMA	Fentanyl + MDMA	Small Gell cap, dark-brown sugar looking	Be careful... Come get things tested!! Spread the word about risks and have healthy discussions about it.					
MDMA	DBZP	Blue pill with moon or banana	Derivative of a piperazine, impurity of BZP synthesis					
MDMA/MDA	N-OH-MDA	Powder/Crystal, Green Baggie, offsite purchase	Precursor for MDA, has been shown to convert to MDA in rats. Will take longer to come on! At least 2 hours!					
Mescaline	DOx (DOB, DOC, DOI)	Orange blotter paper	DOx compounds are psychedelic amphetamines that have a very long duration and intensity					
MXE	Fentanyl	Off white powder, small baggie with alien head print	Get your drugs checked! Fentanyl is a powerful respiratory depressant that is extremely easy to overdose and die from.					
Speed	Methamphetamine	White rectangle "ice" pressed pill	Comedown can make you feel tired, lethargic, and depressed. Set a limit for how much to take and how long to stay up					
Speed	Amphetamine analogue and PMMA	White powder in red zipper bag	PMMA has killed ravers. Talk to our info table for more details					
Synthetic Cocaine	Opiate, Ritalin, Amphetamine, PCP, Ibuprofen, Dipi	White powder	Synthetic drugs are often sold as replacements to the real thing due to prohibition. This shopping list of ingredients lacks research to understand how they effect the body together					
Unknown	Cornstarch	White powder in small purple baggie	Someone is playing silly tricks, be careful.					
Unknown Liquid	GHB	Bottle of clear liquid	GHB is hard to identify, PLEASE CLEARLY MARK YOUR G BOTTLE! We have food colouring and dosing barrels
